

DSCI 310: Historical Horse Population in Canada

Gunisha kaur

2024-12-10

Aim

This project explores the historical population of horses in Canada between 1906 and 1972 for each province.

Data

Horse population data were sourced from the (Government of Canada 2017a, 2017b).

Methods

The R programming language (R Core Team (2019)) and the following R packages were used to perform the analysis: knitr (Xie (2014)), tidyverse (Wickham (2017)), and Quarto (Allaire et al. (2022)). *Note: this report is adapted from Timbers study (Timbers (2020)).*

Results

We can see from Figure 1 that Ontario, Saskatchewan and Alberta have had the highest horse populations in Canada. All provinces have had a decline in horse populations since 1940. This is likely due to the rebound of the Canadian automotive industry after the Great Depression and the Second World War. An interesting follow-up visualisation would be car sales per year for each Province over the time period visualised above to further support this hypothesis.

Suppose we were interested in looking in more closely at the province with the highest spread (in terms of standard deviation) of horse populations. We present the standard deviations in Table 1

Figure 1: Horse populations for all provinces in Canada from 1906 - 1972

Table 1: Standard deviation of historical (1906-1972) horse populations for each Canadian province.

| Province | Std |
|------------------|-----------|
| Saskatchewan | 377265.58 |
| Ontario | 266435.32 |
| Alberta | 266063.19 |
| Manitoba | 122403.87 |
| Quebec | 111411.10 |
| New Brunswick | 22019.49 |
| Nova Scotia | 19879.25 |
| British Columbia | 14945.66 |
| P.E.I. | 11355.75 |

Note that we define standard deviation (of a sample) as

$$s = \sqrt{\frac{\sum_{i=1}^N (x_i - \bar{x})^2}{N - 1}}$$

Additionally, note that in Table 1 we consider the sample standard deviation of the number of horses during the same time span as Figure 1.

In Figure 2 we zoom in and look at the province of **Saskatchewan**, which had the largest spread of values in terms of standard deviation.

Figure 2: Horse populations for the province with the largest standard deviation.
